

MASTERING DEVOPS ESSENTIALS

1. INTRO. TO DEVOPS

1. WHAT IS DEVOPS?

DevOps is a set of practices that combines development (Dev) and operations (Ops) to:

⚙️ Streamline software delivery.

🤝 Improve collaboration across teams

🔄 Foster a culture of automation and continuous improvement.

2. WHY DEVOPS?

- **Faster Deployment** ▶: Shorter release cycles with continuous delivery.
- **Improved Collaboration** 🏗️: Break down silos between teams.
- **Higher Quality** ✅: Automated testing ensures fewer bugs in production.
- **Increased Security** 🔒: Early detection of vulnerabilities.

3. DEVOPS LIFECYCLE

1. **Plan**: Define the roadmap and requirements.
2. **Develop**: Write and build the code.
3. **Build**: Create builds from the codebase.
4. **Test**: Automate and ensure quality.
5. **Release**: Prepare for deployment.
6. **Deploy**: Deliver to production environments.
7. **Operate**: Maintain and monitor systems.
8. **Monitor**: Analyze and improve.

4. KEY PRINCIPLES

- Collaboration 🤝: Developers and operations work together.
- Automation 🤖: Repetitive tasks are automated.
- Continuous Delivery 🔄: Frequent, incremental updates.
- Feedback Loops 🔄: Rapid feedback for improvement.

5. MISCONCEPTIONS

✗ DevOps is just tools.

✗ DevOps is only about automation.

✗ DevOps is a role, not a practice.

Truth: DevOps is a culture and a mindset! 💡

6. TOOLS USED

- Version Control:

Git, GitHub 

- CI/CD:

Jenkins, GitLab CI/CD 

- Containerization:

Docker, Podman 

- Monitoring:

Prometheus, Grafana 

"DevOps is not just about technology; it's about creating a culture of collaboration, efficiency, and continuous improvement."
